

# Towards a brighter future for all children

Raven S. Seltzer, Lic.Ac., Dipl. Ac.

Raven began her work in pediatrics in 1982-83, as a clinical researcher at Children's Hospital of Philadelphia. As part of her clinical Chinese Medical studies, she completed specialized acupuncture training in the Pediatric Clinic of Boston Medical Center in MA, working with a team of some of the nation's top pediatricians. Raven also treated newborns in the NICU and older children in the PICU. This was the inspiration for her development of AcuPoint Therapy. She also enjoys working with women for fertility and pregnancy/labor/delivery.

"We live in a toxic world and we owe it to our children to give them a strong start in life, physically, mentally and emotionally. This is what AcuPoint Therapy is all about: through gentle treatments and techniques, we begin to boost immune function and help little ones create and maintain health from the inside out."

 **AcuPoint  
Therapy™**  
for Babies & Kids

CHILDREN'S WELLNESS  
AT IT'S BEST.

# What is AcuPoint Therapy™ ?

AcuPoint Therapy (tm) is a gentle, non-toxic, non-invasive treatment that is perfect for babies, toddlers and kids of all ages. The system, designed by Raven Seltzer, uses the same acupuncture points on the body, head and ears that would be used for adults, however, no needles are used; instead various techniques and tools are utilized.

*"I am very happy to tell you what changes we have seen in "R" since his first session: His language sounds have been all new!! We've never heard him like this before. He is really trying to communicate with us. Meal times have been great too. His appetite has been really strong. Plus, today I put him standing with his walker and he took 5 steps forward, and while standing, he transitioned from sofa to ottoman. I'm elated and can't wait to see what's next!! Thank you so very much for seeing our son!" -- Alicia R. (regarding her 13-month old son, born 7 weeks premature.)*

- Bedwetting
- Developmental Delays
- Digestive Disorders/Nausea
- Headaches
- Learning/Cognitive Delays
- Visual Processing Disorders
- Speech dysfunction
- Orthopedic Injury/Surgery
- Seizures
- And more...

## What to expect:

AcuPoint Therapy Sessions typically last 30 minutes, however, for your child's first exam and treatment, please be prepared to schedule 60 minutes. Raven will speak with you and the child (if they are verbal) first and perform appropriate diagnostic tests which will help to determine the appropriate treatment plan.

If you are bringing in your baby or toddler for treatment, Raven will ask you (Mom or Dad) to hold them while she treats. Older children may enjoy climbing up onto the treatment table to lie down and rest while being treated..

Raven treats a 9 year-old patient.

Though children do tend to respond much faster than adults, it may take up to 4 treatments before you see noticeable changes. This is especially true with developmental delays and chronic conditions. For best results, please be patient and make sure your child completes their treatment plan recommendations.
